

WATCHMAN ENTRY ALERT

The Entry Alert is an electronic doorway alarm that sounds a buzzer when someone enters. Using Passive Infrared (PIR) technology, it detects changes in heat between room temperature and body heat—so there's no beam, reflector, or "magic eye" to align. It's an industrial-grade, low-maintenance unit built for years of dependable service.

Power it with four AA alkaline batteries or a standard 9-volt DC adapter from any hardware or electronics store. Batteries typically last 8–12 months, depending on traffic and usage. Ideal for shops and reception areas to signal new arrivals, the Entry Alert also offers an optional extension sounder for a back office.

TECHNICAL SPECIFICATIONS

FEATURES

- Ability to adjust the volume of the alert
- Internal or external sounder
- Choose from a chirp or buzzer tone
- Discreet size and robust, durable design

SPECIFICATIONS

- Powered by 4 Alkaline AA Batteries
- AC power adaptor available as an additional accessory
- Overall dimensions 165mm x 120mm x 60mm
- Universal mounting kit and installation instructions included

Additional Accessories Available
